Profile

Motivated and liable Engineer with a year of experience developing and innovative projects, helping companies to meet and exceed projected expectations. Skilled in design, prototyping, and testing. Currently doing freelancer projects with REACT but searching for a place where I can learn as a person and programmer.

Employment History

Full Stack JavaScript Developer at Midware, San José
June 2022 — October 2023

- Developed, improved and implemented projects for 8 international companies.
- Created 3 integration applications with NetSuite to save and send data to Shopify and other inside projects via API REST and SOAP, saving data collection time and improving data storage.
- Creation of user stories, project documentation and mock-ups, with an Agile methodology, SCRUM.
- Handled customer queries effectively, providing solutions to their problems with 100% customer approval.

Education

Bachelor in middle education, Agropecuario de San Carlos, San Carlos
February 2011 — December 2019

Middle Technician in Software Development, Agropecuario de San Carlos, San Carlos
February 2015 — December 2017

Bachelor Computer Engineering, ITCR, San Carlos
February 2018 — March 2023

Internships

Software Developer at ICE, San Ramon
October 2018 — December 2018

Created an inventory Java application to know who is in charge of the items and their last registered location with MySQL, hosted in the inside network company to any employee and gave support to any IT problem that the workers could have with the computers.

Extra-curricular activities

Object-oriented programing tutor at ITCR, San Carlos
February 2023 — November 2023

Attend any student that needed help with object-oriented programming courses, mainly based on java and some databases languages.

Mentor at ITCR, San Carlos
January 2021 — February 2023

Person in charge of helping new students with the enrollment in the college and responsible for solving doubts and problems that they had.
